

# Django Final Project

Create a web. The web must be in English.

In order for this task to be assessed, it is compulsory to attend class and show the teacher the progress made on a daily basis.

There will be an individual assessment test for this task.

## Phases of project implementation.

1. Design a web.

It must contain at least:

- Two tables with relations between them.
- List of objects. Detail of an object. Forms to add/delete/update.
- Use of sessions.
- Images.

2. After the teacher checks that the design is ok, create the web.

3. Individual assesment.

## Score:

- Documentation:
  - Brief description of the App.
  - Use cases.
  - DB design.
  - Screen design.
- Database access. Use of filters in the queries. Aggregation. Ordering of the results.
- Use of Class Views.
- Use of Forms or ModelForms accordingly to the situation.
- Use of Sessions.
- Functionality of the screens, easy navigation, etc.
- Good organization of the code: Apps, URLs
- Error handling. Robustness.
- Tidyness and organization of the "Admin" interface.
- Something extra and not required but that adds some extra value to your app. You must describe it in the document of design.

## Delivery:

Documentation, including:

- Name.
- Design.
  - Brief description of the App.
  - Use cases.
  - DB design.
  - Screen design.
- Screen shots.
- Description of extra work included.
