Symfony Final Project

Create a web that must include at least the following:

- A menu with options. Those options are hyperlinks to other pages or other places within the web page.

- A form and the management of the data introduced by the user.

- A login so that it is necessary to be logged to access the form.

The documentation and the web page must be written in English. You can ask for help whenever necessary.

You can use CSS and BootStrap.

Perform the following tasks

1. Create a document with the documentation. You must include:

   a. Design of the screens and how to navigate between them.

   b. Directory schema with the files that you created and a brief description.

   c. Paste captures of the final screens of your web.

2. Create the web.

   a. The code must be clear, well organized and documented when appropriate.

   b. The web must work. Do not try to create all the functionalities at once. Focus on a specific functionality at a time until it works perfectly.

   c. Handle the errors and show the corresponding messages.

3. The project together with the web page must be written in English. You can ask for help whenever necessary.

Project avaliation.

If the project is delivered after the deadline, its score will be penalized.

In order to get the maximun score in each of the sections the web pages must fullfill the requirements: Good appearance, responsiveness, accesibility and easy navigation, good organization of the code, error handling, English language, etc.

If the project

1. (2 points) Document with the design. It must be a pdf document.
